

Sivan Payment AI

Autonomous Agentic Commerce, Multi-Channel Payment Coordination, and x402 Settlement Infrastructure

Company: Sivan Technologies | CAC Business Name Registration: BN 9585790 | Tax ID: 2623798940018

Website: <https://sivantech.online> | Contact: samson@sivantech.online / michealsamson1@gmail.com

Telegram Layer: @Sivan_Ai | Location: Abuja, Federal Capital Territory, Nigeria

Executive Summary:

Sivan Technologies bridges informal social commerce and autonomous AI software agents to secure, non-custodial payment rails—eliminating counterparty risk for digital creators, freelancers, agencies, and businesses across Africa and globally.

The Problem

The Double Bottleneck of Informal Social Commerce & Autonomous AI Settlement

1. High Counterparty Fraud in Informal Commerce:

Over 80 percent of digital service trades in emerging markets take place informally over messaging channels (Telegram and WhatsApp). Service providers fear non-payment after work delivery, while buyers fear paying upfront without work verification. Fake bank alerts cause millions of dollars in annual losses.

2. Settlement Failure for Autonomous AI Agents:

Next-generation AI agents and developer APIs cannot open traditional bank accounts or hold credit cards. They require machine-readable, deterministic financial facilities to contract services, verify deliverables, and settle payments programmatically.

The Solution

Deterministic Service Agreements & x402 Payment Facilities

1. Multi-Channel Conversational Commerce:

Users negotiate agreements naturally inside chat applications (@Sivan_Ai on Telegram & WhatsApp) or via developer APIs.

2. Verifiable Service Agreement State Machine:

Transactions progress through deterministic state transitions: Draft -> Pending Acceptance -> Funded -> Work Delivered -> Released to Bank.

3. Non-Custodial Stablecoin & Fiat Rails:

Funds are locked in USD Coin (USDC on Solana) using x402 payment headers and released instantly into local commercial bank accounts (NGN) upon 1-tap approval.

Multi-Channel Architecture

Frictionless Commerce Where Users & AI Agents Already Communicate

1. Telegram Production Layer (@Sivan_Ai):

Direct bot interaction, group agreement coordination, instant inline keypads, balance tracking, and status monitoring.

2. WhatsApp Business Layer:

Interactive menu flows, phone-number-based authentication, and instant transaction notifications.

3. x402 Web API & Checkout Gateway:

Programmatic HTTP 402 Payment Required facilities allowing software agents and e-commerce platforms to request, fund, and verify payments via automated headers.

How It Works

End-to-End Trustless Service Settlement in 4 Simple Steps

Step 1: Agreement Creation — Buyer or Seller initiates agreement parameters (service scope, price, delivery timeframe, counterparty identity).

Step 2: Fund Locking — Buyer locks USDC or NGN into the Service Agreement. Funds are safely held in non-custodial infrastructure until milestone completion.

Step 3: Work Delivery & Verification — Seller submits proof of work (links, files, deliverables). The buyer is notified instantly.

Step 4: 1-Tap Settlement — Buyer approves delivery. Sivan Payment AI executes instant settlement to the seller's wallet or local bank account.

Technology Stack & Security

Battle-Tested Infrastructure Built for High Throughput & Low Latency

1. **Core API & Backend:** Fastify, TypeScript, Node.js, and Cloudflare Worker edge routing for sub-100ms global response times.
2. **Blockchain & Payment Protocol:** Solana SPL Token Program, USDC native transfer instructions, x402 payment headers, and memo hash verification.
3. **Non-Custodial Wallet Management:** Automated wallet creation, multi-tier key storage, and non-custodial address pairing.
4. **System Reliability:** 100 percent test coverage across unit tests, rate-limiting, and error-resilient database transactions.

Market Opportunity

Tapping into a \$50B+ Social Commerce Market and Global AI Economy

1. Total Addressable Market (TAM):

\$50B+ African E-Commerce and Social Commerce Market + \$100B Global Agentic AI Economy.

2. Serviceable Addressable Market (SAM):

\$12B Digital Freelance, Creative Services, and Remote Work Economy in Sub-Saharan Africa.

3. Serviceable Obtainable Market (SOM):

\$250M Annual Transaction Volume across 500,000 active freelancers, merchants, and developer agents within 36 months.

Business Model

Diversified Revenue Streams Driven by Transaction Volume

1. **Agreement Coordination Fee:** 0.5 percent to 1.5 percent per successful Service Agreement settlement.
2. **Merchant API Checkout Fee:** 1.0 percent flat fee on API checkout transactions.
3. **Cross-Border & Off-Ramp Spread:** FX conversion spread on USDC-to-NGN commercial bank payouts.
4. **Enterprise Agentic Facilities:** Subscription plans for high-frequency AI agents and corporate API checkouts.

Competitive Advantage

Why Sivan Payment AI Wins

- 1. Multi-Channel Native:** Operates seamlessly on Telegram, WhatsApp, and Web APIs without forcing users to download new applications.
- 2. Machine-Readable x402 Protocol:** Built natively for both human chat interactions and autonomous software agents.
- 3. Instant Bank Off-Ramps:** Direct 1-tap settlement into Nigerian commercial bank accounts.
- 4. Non-Custodial Trust Architecture:** Eliminates platform counterparty risk through programmatic state machines.

Regulatory & Institutional Compliance

Enterprise-Grade Compliance Aligned with CBN & Global Standards

- 1. Corporate Registration:** Sivan Technologies registered in Nigeria (CAC Business Name BN 9585790 | Tax ID TIN 2623798940018).
- 2. Risk-Based Tiered KYC/KYB:** 4-Tier Customer Due Diligence framework incorporating BVN, NIN API verification, and corporate KYB extracts.
- 3. Institutional AML/CFT Framework:** Automated sanctions screening (OFAC, UN, NFIU), transaction surveillance engines, and SCUML/NFIU reporting alignment.
- 4. Operational Governance:** Dedicated Head of Risk & Compliance with annual independent audit policies.

Team & Traction

Experienced Leadership & Production-Ready Execution

- 1. Samson Micheal Olaleye (Founder & CEO, 80 percent Equity):** Full-stack software architect, FinTech infrastructure builder, and product strategist.
- 2. Jonathan Hart (Co-Founder & Operations Partner, 20 percent Equity):** Business operations, merchant onboarding, and strategic growth.
- 3. Current Traction:** Live production backend, operational Telegram bot (@Sivan_Ai), WhatsApp integration layer, complete API test suite, and active merchant onboarding pipeline.

The Ask & Use of Funds

Accelerating Market Expansion & API Penetration

Seeking Grant & Strategic Capital Support to:

- 1. Scale Merchant Onboarding:** Acquire 10,000 active freelancers, creators, and social commerce merchants.
- 2. Expand Developer API Ecosystem:** Deepen x402 integration for autonomous AI agent frameworks and e-commerce platforms.
- 3. Liquidity & FX Settlement Depth:** Enhance automated off-ramp rails and multi-currency payout speed.
- 4. Compliance & Licensing:** Expand regulatory authorizations across additional regional jurisdictions.
