

AML, CTF and Fraud Prevention Policy

Production-grade policy aligned to Sivan Technologies current registered structure, payment coordination controls, multi-currency partner use case, and domestic protected transaction workflows.

Company	Sivan Technologies
Brand/Product	Sivan
Registered Nature of Business	Software development, web design, and intranet development
Product Positioning	Financial technology software platform for payment coordination, multi-currency collection support, local payout workflows, customer records, risk review, and domestic protected transaction workflows through licensed payment partners.
Registered Address	No. 3 Olayinka Street, Byazhin Across, Kubwa, Federal Capital Territory, Nigeria
Business Commencement Date	2 June 2026
Document Type	AML, CTF and Fraud Prevention Policy
Version / Effective Date	Version 1.1 / 10 June 2026

Name	Role in Sivan	Responsibility
Olalaye Samson	Founder and Chief Executive Officer	Product leadership, business direction, technology execution, payment partner coordination, compliance ownership, and final policy approval.
Jonathan Hart	Co-Founder / Operations Partner	Operational support, documentation, pilot onboarding, partner coordination, customer support workflow support, and internal control support.

1. Purpose

The purpose of this Anti-Money Laundering, Counter-Terrorist Financing, and Fraud Prevention Policy is to define how Sivan Technologies identifies, verifies, monitors, escalates, and records customer and transaction risks. This policy supports Sivan's current domestic payment coordination MVP and planned multi-currency collection, conversion, and payout workflows through licensed infrastructure partners.

2. Scope

This policy applies to Sivan Technologies, its founders, partners, administrators, contractors, customer support personnel, compliance reviewers, payment operations staff, and all customer activities that involve onboarding, collections, conversions, payouts, protected transaction workflows, customer records, and transaction monitoring.

3. Operating Model and Regulatory Boundaries

- Sivan is a technology and payment coordination platform. It does not operate as a bank, deposit-taking institution, licensed escrow company, money transmitter, or self-custodial digital asset custodian.
- Payment collection, conversion, settlement, and payout services are provided through licensed payment infrastructure partners, subject to their compliance requirements and availability.
- Stablecoin-supported conversion or settlement, where offered, must be performed through approved partner infrastructure. Sivan will not self-custody customer stablecoins or digital assets unless properly licensed and approved.
- Domestic protected transaction workflows may be used for NGN transactions where funds are verified through approved payment providers and released only after internal checks, customer confirmation, settlement status, and dispute status are reviewed.

4. Governance and Responsibilities

Role	Responsibility
Founder and Chief Executive Officer - Olalaye Samson	Owns overall compliance direction, approves high-risk decisions, reviews serious escalations, coordinates payment partner requirements, and signs policy updates.
Co-Founder / Operations Partner - Jonathan Hart	Supports onboarding documentation, operational controls, customer support escalation, partner coordination, and implementation of procedures.
Operations / Support Personnel	Collect customer information, log transactions, escalate suspicious activity, maintain evidence, and follow approved workflows.

5. Customer Due Diligence

5.1 Minimum Customer Information

- Full name, phone number, email address, country, and stated purpose of use for individual customers.
- Business name, registration details, address, website/profile, ownership information, authorised representative, and supporting documents for business customers.
- Bank account or payout account details required for withdrawals, account-name matching, and payout risk review.
- Additional identity, address, source of funds, source of wealth, or business activity documents for higher-risk customers.

5.2 Risk-Based Verification

- Low-risk customers may use limited services after basic verification and transaction limits.
- Medium-risk customers may require identity document review, bank account verification, and additional questionnaire responses.
- High-risk customers or transactions may require enhanced due diligence, management approval, lower limits, manual review, delayed payout, or rejection.
- Customers who fail verification, provide inconsistent information, or trigger partner restrictions may be declined or suspended.

6. Transaction Monitoring

Sivan monitors transactions for unusual activity, fraud indicators, sanctions concerns, money laundering indicators, suspicious customer behaviour, and payment provider alerts. Monitoring may be manual, automated, or partner-driven depending on product maturity and provider capability.

- Unusually high transaction value compared with customer profile.
- Frequent incoming and outgoing transactions with no clear business purpose.
- Multiple customers using the same payout account or device indicators without explanation.
- Rapid conversion or withdrawal immediately after receipt of funds without a clear commercial basis.
- Repeated chargebacks, refund requests, failed payments, or dispute activity.
- Mismatched identity, business name, bank account name, or beneficiary information.
- Use of Sivan for prohibited goods, scams, fraud, unlicensed financial activity, or restricted digital asset activities.
- Customer refusal to provide required information, evasive explanations, or inconsistent transaction narratives.

7. Source of Funds and Source of Wealth

Customers may be asked to provide evidence of source of funds or source of wealth where transaction value, customer risk, payment method, geography, product type, or partner requirement justifies additional review. Acceptable evidence may include invoices, contracts, business records, bank statements, tax documents, platform earning records, or other reliable documentation.

8. Suspicious Activity Escalation

- Any suspicious activity must be logged with customer details, transaction references, evidence, reviewer notes, and action taken.
- The Founder/CEO or designated compliance reviewer will decide whether to approve, reject, hold, refund, request more information, report, or terminate the customer relationship.
- Where required by law, regulation, or partner obligation, suspicious activity may be reported to the appropriate payment partner, bank, regulator, law enforcement body, or financial intelligence authority.
- Internal staff must not tip off customers where a suspicious activity review or reporting obligation is involved.

9. Sanctions, PEP, and Restricted Countries

- Sivan may screen customers, businesses, owners, counterparties, and beneficiaries against sanctions, politically exposed person, adverse media, and restricted-country indicators through manual review or partner tools.
- Customers connected to sanctioned persons, restricted jurisdictions, or unacceptable risk categories may be rejected, suspended, or escalated to payment partners.

10. Payout Controls and Release Controls

- Payouts may be delayed or blocked where identity, settlement, compliance, fraud, dispute, or provider status is unresolved.

- For protected domestic transaction workflows, release decisions must consider payment confirmation, settlement status, buyer/customer confirmation, dispute status, seller/beneficiary verification, and risk flags.
- For multi-currency collection or conversion workflows, withdrawal is subject to partner confirmation, compliance checks, supported currencies, and approved payout rails.
- Sivan will not advance its own funds for customer payouts before settlement confirmation unless a separately approved working-capital policy exists.

11. Record Keeping

- Sivan maintains records of onboarding, identity checks, business verification, payment provider references, transaction logs, conversion records, payout records, complaints, disputes, suspicious activity reviews, and compliance decisions.
- Records are retained for at least five years or longer where required by payment partners, regulators, audits, legal matters, or dispute resolution.
- Records must be stored securely, with access limited to authorised personnel.

12. Training and Review

- Founders, partners, administrators, and support personnel involved in customer onboarding or payment operations must understand customer verification, AML red flags, escalation paths, prohibited activity, and record-keeping obligations.
- This policy must be reviewed at least annually or earlier after material changes to product scope, payment partners, countries served, digital asset exposure, transaction volume, or regulatory obligations.

Approval and Sign-Off

This document has been reviewed and approved for use as an internal operating policy of Sivan Technologies. It is intended for onboarding, partner due diligence, compliance review, and operational governance. Implementation must match the procedures described in this document.

Approved by	Signature	Date
