

Sivan Payment AI

Autonomous Agentic Commerce, Multi-Channel Payment Coordination,
and x402 Settlement Infrastructure

Multi-Channel Native	x402 Agentic Protocol	Deterministic Agreements	Instant NGN Payouts
Telegram & WhatsApp Bots	Machine-Readable APIs	Verifiable State Machines	Direct Commercial Banks

Corporate Entity: Sivan Technologies (CAC Business Name BN: 9585790 | Tax ID TIN: 2623798940018)

Founders: Samson Micheal Olaleye (Founder & CEO, 80%) & Jonathan Hart (Co-Founder & Operations Partner, 20%)

Location: Abuja, FCT, Nigeria | **Website:** <https://sivantech.online> | **Telegram:** @Sivan_Ai

The Problem

The Double Bottleneck of Informal Social Commerce & Autonomous AI Settlement

1. High Counterparty Fraud in Informal Social Commerce

Over 80 percent of digital service transactions in emerging markets take place informally over messaging platforms like Telegram and WhatsApp.

Creators, freelancers, and small businesses face severe counterparty risk:

- Service providers fear doing work without getting paid.
- Clients fear paying upfront without work verification.
- Fake bank alerts, payment delays, and lack of audit trails cause millions of dollars in annual lost revenue.

2. Settlement Failure for Autonomous AI Software Agents

Next-generation AI agents and developer APIs cannot open traditional commercial bank accounts or hold physical credit cards.

They require machine-readable, deterministic financial facilities to contract services, verify deliverables, and settle payments programmatically.

Without native x402 payment headers and automated Service Agreements, agentic AI commerce remains constrained.

The Solution

Deterministic Service Agreements & x402 Payment Facilities

1. Multi-Channel Conversational Interface

Users negotiate agreements naturally inside chat applications (@Sivan_Ai on Telegram & WhatsApp) or via developer APIs without downloading external apps.

2. Verifiable Agreement State Machine

Transactions progress through deterministic state transitions: Draft -> Pending Acceptance -> Funded -> Work Delivered -> Released to Bank.

3. Non-Custodial Stablecoin & Fiat Rails

Funds are locked in USD Coin (USDC on Solana) using x402 payment headers and released instantly into local commercial bank accounts (NGN) upon 1-tap approval.

Multi-Channel Architecture

Frictionless Commerce Where Users & AI Agents Already Communicate

Telegram Production Layer (@Sivan_Ai) • Direct bot interaction & inline keypads. • Group agreement coordination. • Instant balance tracking & status monitoring. • 1-tap approval buttons.	WhatsApp Business Layer • Interactive menu flows. • Phone-number-based auth. • Instant transaction notifications. • Seamless mobile experience.	x402 Web API & Gateway • Programmatic HTTP 402 headers. • Machine-readable AI settlement. • Developer API checkouts. • Webhook event triggers.
---	--	---

How It Works

End-to-End Trustless Service Settlement in 4 Simple Steps

Step 1: Agreement Creation

Buyer or Seller initiates agreement parameters (service scope, price, delivery timeframe, counterparty identity).

Step 2: Fund Locking

Buyer locks USDC or NGN into the Service Agreement. Funds are safely held in non-custodial infrastructure until milestone completion.

Step 3: Work Delivery & Verification

Seller submits proof of work (links, files, deliverables). The buyer is notified instantly.

Step 4: 1-Tap Settlement

Buyer approves delivery. Sivan Payment AI executes instant settlement to the seller's wallet or local commercial bank account.

Technology Stack & Security

Battle-Tested Infrastructure Built for High Throughput & Low Latency

Core API & Backend: Fastify, TypeScript, Node.js, and Cloudflare Worker edge routing for sub-100ms global response times.
Blockchain & Payment Protocol: Solana SPL Token Program, USDC native transfer instructions, x402 payment headers, and memo hash verification.
Non-Custodial Wallet Management: Automated wallet creation, multi-tier key storage, and non-custodial address pairing.
System Reliability: 100 percent test coverage across automated unit tests, rate-limiting, and error-resilient database transactions.

Market Opportunity

Tapping into a \$50B+ Social Commerce Market and Global AI Economy

\$50 Billion+

Total Addressable Market (TAM)

African E-Commerce and Social Commerce Market +
\$100B Global Agentic AI Economy.

\$12 Billion

Serviceable Addressable Market (SAM)

Digital Freelance, Creative Services, and Remote
Work Economy in Sub-Saharan Africa.

\$250 Million

Serviceable Obtainable Market (SOM)

Annual Transaction Volume across 500,000 active
freelancers, merchants, and developer agents.

Business Model

Diversified Revenue Streams Driven by Transaction Volume

1. Agreement Coordination Fee: 0.5 percent to 1.5 percent per successful Service Agreement settlement.
2. Merchant API Checkout Fee: 1.0 percent flat fee on API checkout transactions.
3. Cross-Border & Off-Ramp Spread: FX conversion spread on USDC-to-NGN commercial bank payouts.
4. Enterprise Agentic Facilities: Subscription plans for high-frequency AI agents and corporate API checkouts.

Competitive Advantage

Why Sivan Payment AI Wins

Multi-Channel Native: Operates seamlessly on Telegram, WhatsApp, and Web APIs without forcing users to download new applications.

Machine-Readable x402 Protocol: Built natively for both human chat interactions and autonomous software agents.

Instant Bank Off-Ramps: Direct 1-tap settlement into Nigerian commercial bank accounts.

Non-Custodial Trust Architecture: Eliminates platform counterparty risk through programmatic state machines.

Regulatory & Institutional Compliance

Enterprise-Grade Compliance Aligned with CBN & Global Standards

Corporate Registration: Sivan Technologies registered in Nigeria (CAC Business Name BN 9585790 | Tax ID TIN 2623798940018).

Risk-Based Tiered KYC/KYB: 4-Tier Customer Due Diligence framework incorporating BVN, NIN API verification, and corporate KYB extracts.

Institutional AML/CFT Framework: Automated sanctions screening (OFAC, UN, NFIU), transaction surveillance engines, and SCUML/NFIU reporting alignment.

Operational Governance: Dedicated Head of Risk & Compliance with annual independent audit policies.

Team & Traction

Experienced Leadership & Production-Ready Execution

Samson Micheal Olaleye (Founder & CEO, 80% Equity)
Full-stack software architect, FinTech infrastructure builder, and product strategist leading technical execution and compliance.
Jonathan Hart (Co-Founder & Operations Partner, 20% Equity)
Business operations, merchant onboarding, partner relations, and strategic growth across Nigeria and West Africa.
Production Traction:
Live production backend, operational Telegram bot (@Sivan_Ai), WhatsApp integration layer, complete API test suite, and active merchant onboarding pipeline.

The Ask & Use of Funds

Accelerating Market Expansion & API Penetration

Seeking Grant & Strategic Capital Support to:

1. **Scale Merchant Onboarding:** Acquire 10,000 active freelancers, creators, and social commerce merchants.
2. **Expand Developer API Ecosystem:** Deepen x402 integration for autonomous AI agent frameworks and e-commerce platforms.
3. **Liquidity & FX Settlement Depth:** Enhance automated off-ramp rails and multi-currency payout speed.
4. **Compliance & Licensing:** Expand regulatory authorizations across additional regional jurisdictions.
