

Sivan Payment AI

Autonomous Agentic Commerce, Multi-Channel Payment Coordination, and x402 Settlement Infrastructure

Multi-Channel Native	x402 Agentic Protocol	Deterministic Agreements	Instant NGN Payouts
Telegram & WhatsApp Bots	Machine-Readable APIs	Verifiable State Machines	Direct Commercial Banks

Corporate Entity: Sivan Technologies (CAC Business Name BN: 9585790 | Tax ID TIN: 2623798940018)

Founders: Samson Micheal Olaleye (Founder & CEO, 80%) & Jonathan Hart (Co-Founder & Operations Partner, 20%)

Location: Abuja, FCT, Nigeria | **Website:** <https://sivantech.online> | **Telegram:** @Sivan_Ai

The Problem

The Double Bottleneck of Informal Social Commerce & Autonomous AI Settlement

1. High Counterparty Fraud in Informal Commerce

Over 80 percent of digital service transactions in emerging markets take place informally over messaging platforms like Telegram and WhatsApp.

Creators, freelancers, and small businesses face severe counterparty risk:

- Service providers fear doing work without getting paid.
- Clients fear paying upfront without work verification.
- Fake bank alerts, payment delays, and lack of audit trails cause millions of dollars in lost revenue annually.

2. Settlement Failure for Autonomous AI Agents

Next-generation AI agents and developer APIs cannot open traditional commercial bank accounts or hold physical credit cards.

Key infrastructure gaps for AI agents:

- Autonomous agents lack machine-readable financial facilities to contract services.
- Payment verification must happen programmatically without human intervention.
- Without native x402 payment headers and automated Service Agreements, agentic AI commerce remains constrained.

The Solution

Deterministic Service Agreements & x402 Payment Facilities

1. Multi-Channel Conversational Interface

Users negotiate agreements naturally inside chat applications (@Sivan_Ai on Telegram & WhatsApp) or via developer APIs without downloading external apps.

2. Verifiable Agreement State Machine

Transactions progress through deterministic state transitions: Draft -> Pending Acceptance -> Funded -> Work Delivered -> Released to Bank.

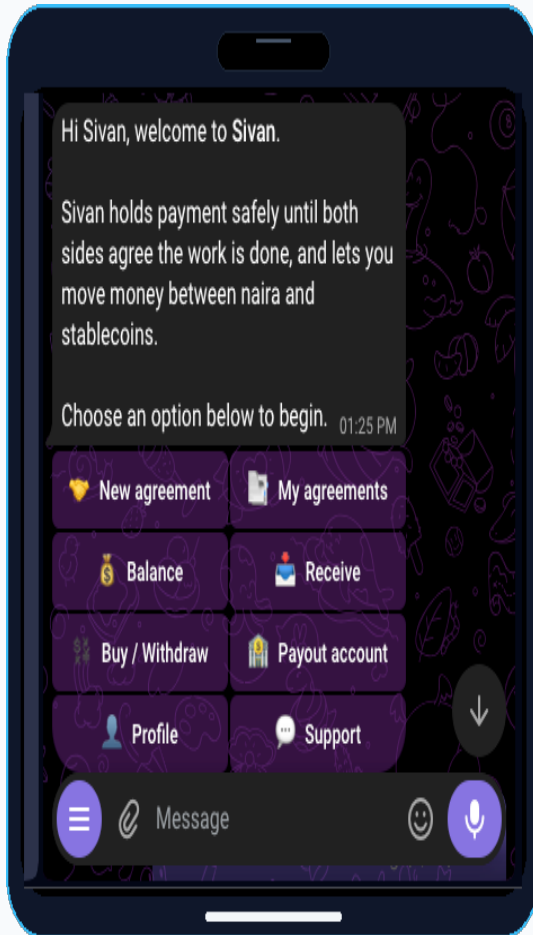

3. Non-Custodial Stablecoin & Fiat Rails

Funds are locked in USD Coin (USDC on Solana) using x402 payment headers and released instantly into local commercial bank accounts (NGN) upon 1-tap approval.

Telegram Live Conversational Layer (@Sivan_Ai)

Live Production Mobile Flow — Frictionless Chat Navigation & Inline Key pads

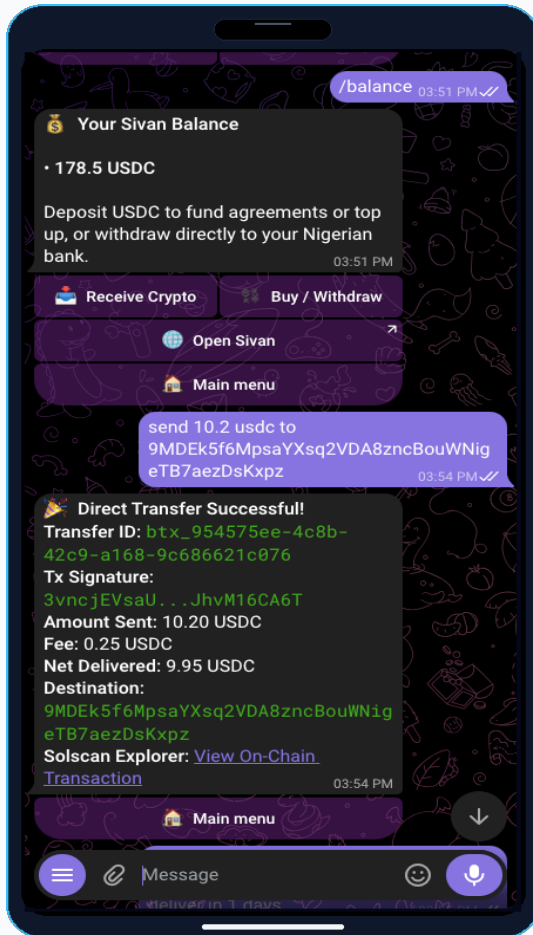

Production Telegram Bot Interface (@Sivan_Ai)

- **Native Chat Navigation:** Users trigger agreements, check wallet balances, and configure payout accounts directly within Telegram.
- **Interactive Inline Key pads:** 1-tap buttons for *New agreement*, *My agreements*, *Balance*, *Receive*, *Buy / Withdraw*, and *Profile*.
- **Group Commerce Coordination:** Supports multi-party group chats where buyers and sellers agree terms in public, and Sivan Payment AI automatically extracts and locks agreement state.
- **Zero Download Friction:** No third-party app download required—operates instantly inside Telegram for 900M+ global users.

Direct Transfer & On-Chain Settlement

Sub-Second Settlement on Solana with Verifiable Explorer Proof

Live On-Chain Settlement Engine

- **Natural Language Command Execution:** Users type simple chat prompts like 'send 10.2 usdc to 9MDEk...' to trigger instant transfers.
- **Solana On-Chain Verification:** Every transaction generates an immutable Solscan Explorer signature (e.g. 3vncjEVsaU...Jhvm16CA6T) for non-repudiation.
- **Real-Time Fee Transparency:** Displays exact Net Delivered amount, 0.25 USDC platform fee, and instant balance update.
- **1-Tap Bank Off-Ramp:** Sellers can instantly convert USDC to NGN and withdraw to Nigerian commercial banks in seconds.

Technology Stack & Security

Battle-Tested Infrastructure Built for High Throughput & Low Latency

Core API & Edge Routing Fastify, TypeScript, Node.js, and Cloudflare Worker edge routing for sub-100ms global response times.	Blockchain Payment Protocol Solana SPL Token Program, USDC native transfer instructions, x402 payment headers, and memo hash verification.
Non-Custodial Wallet Management Automated non-custodial wallet creation, multi-tier key security, and seamless address pairing.	System Reliability & Safety 100 percent test coverage across automated unit tests, rate-limiting, and error-resilient database transactions.

Market Opportunity

Tapping into a \$50B+ Social Commerce Market and Global AI Economy

\$50B+

Total Addressable Market (TAM)

African E-Commerce, Social Commerce & \$100B Global Agentic AI Economy.

\$12B

Serviceable Addressable Market (SAM)

Digital Freelance, Creative Services & Remote Work Economy in Sub-Saharan Africa.

\$250M

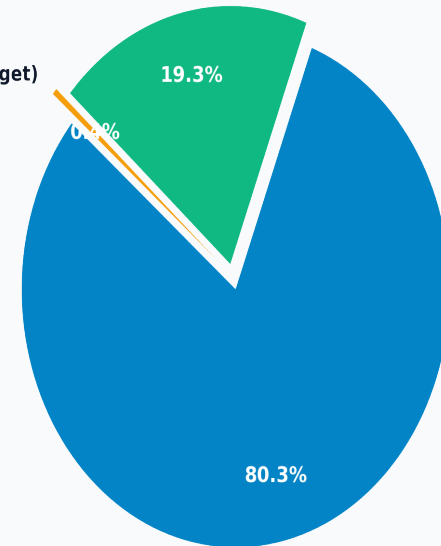

Serviceable Obtainable Market (SOM)

3-Year Target Sivan Payment AI Volume across 500,000 active freelancers & developer agents.

Sivan Payment AI — Market Opportunity Breakdown

SAM: B (Sub-Saharan Freelance)

SOM: M (Sivan 3-Year Target)

TAM: B+ (African E-Commerce & AI)

Business Model

Diversified Revenue Streams Driven by Transaction Volume

1. Agreement Coordination Fee 0.5 percent to 1.5 percent fee per successful Service Agreement settlement.	2. Merchant API Checkout Fee 1.0 percent flat fee on API checkout volume processed for merchants.
3. Cross-Border & Off-Ramp Spread FX conversion spread on USDC-to-NGN commercial bank payouts.	4. Enterprise Agentic Facilities Subscription plans for high-frequency AI agents and corporate API checkouts.

Competitive Advantage

Why Sivan Payment AI Wins

1. Multi-Channel Native Operates seamlessly on Telegram, WhatsApp, and Web APIs without forcing users to download new applications.	2. Machine-Readable x402 Protocol Built natively for both human chat interactions and autonomous software agents.
3. Instant Bank Off-Ramps Direct 1-tap settlement into Nigerian commercial bank accounts.	4. Non-Custodial Trust Architecture Eliminates platform counterparty risk through programmatic state machines.

Regulatory & Institutional Compliance

Enterprise-Grade Compliance Aligned with CBN & Global Standards

1. Corporate Registration Sivan Technologies registered in Nigeria (CAC Business Name BN 9585790 Tax ID TIN 2623798940018).	2. Risk-Based Tiered KYC/KYB 4-Tier Customer Due Diligence framework incorporating BVN, NIN API verification, and corporate KYB extracts.
3. Institutional AML/CFT Framework Automated sanctions screening (OFAC, UN, NFIU), transaction surveillance engines, and SCUML/NFIU reporting alignment.	4. Operational Governance Dedicated Head of Risk & Compliance with annual independent audit policies.

Team & Traction

Experienced Leadership & Production-Ready Execution

Samson Micheal Olaleye

Founder & CEO (80% Equity)

Full-stack software architect, FinTech infrastructure builder, and product strategist leading technical execution, x402 protocols, and regulatory compliance.

Jonathan Hart

Co-Founder & Operations Partner (20% Equity)

Business operations, merchant onboarding, partner relations, and strategic growth across Nigeria and West Africa.

Production Traction Highlights

- Live production backend deployed on Cloudflare Workers & Fastify engine.
- Operational Telegram bot (@Sivan_Ai) with direct transfer & agreement state machine.
- WhatsApp integration layer & active merchant onboarding pipeline.
- 100 percent automated unit & integration test coverage.

The Ask & Use of Funds

Accelerating Market Expansion & API Penetration

1. Scale Merchant Onboarding Acquire 10,000 active freelancers, creators, and social commerce merchants across Nigeria and West Africa.	2. Expand Developer API Ecosystem Deepen x402 integration for autonomous AI agent frameworks and e-commerce checkout gateways.
3. Liquidity & FX Settlement Depth Enhance automated off-ramp rails and multi-currency payout speed.	4. Compliance & Licensing Expand regulatory authorizations across additional regional jurisdictions.
